

## ReadMe

This project was written by php and uses MySQL as the database. We use a localhost to run our project. First you need start XAMPP, enable localhost:8080 under the network and make sure Apache, MySQL and proFTPD all connect successfully. Open the Google Chrome browser and go to <http://localhost:8080/phpmyadmin/>. Create a new database called carrenter, then click Import button and import the quicksetup.sql which is in our project folder to set up the database. Then open the lampp disk (under the Volumes and click Explore) and put our project folder in the htdocs folder. Open the browser and go to <http://localhost:8080/superrent/cregister.php>, you will see the log in page of our project.

You can log in as a customer or as a clerk. To log in as a customer, you can either follow the instructions and create a new account, or you can use Driver Licence Number: 123456, Password:123456 to log in. To log in as a clerk, you can use Username: Violet, Password:199829 to log in.
